

BRACKETT

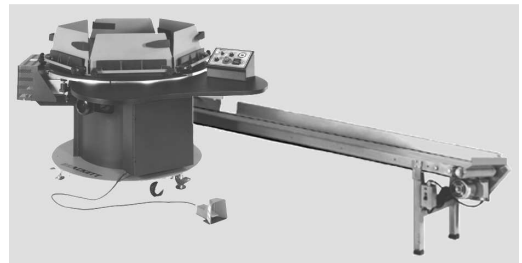

"CO-2" Model Conveyor

Expand the delivery abilities of your
Brackett Circular Padder
by adding our optional conveyor.

The Brackett Circular Padder has rapidly become an invaluable piece of production equipment in shops world-wide. The addition of the CO-2 model conveyor greatly adds to that value.

This unit simply plugs into the built-in outlet on your **Circular Padder** and it's ready for work! Its 8-foot* length and 18-inch* width can extend the "reach" of the **Circular Padder's** delivery chute right into the next phase of your operation.
(*Dimensions approx.)

The angle of the conveyor bed matches the precise angle of the **Circular Padder** delivery chute, allowing pads to slip smoothly on to the belt, either in a constant, shingled stream or stacked against the work-stop. The speed of the belt can be adjusted up or down as desired.

Call us with any questions and find out how little it can cost to connect your "Padding Department" (Circular Padder) to the rest of your shop.
