

WebMaster

BRACKETT

Brackett's "WebMaster Twin-stream Interceptor System" interrupts cut sheet production on your web press at pre-determined counts -single or dual stream. At that instant, WebMaster automatically inserts dividers with **100% accuracy** in counts as few as ten. *Replaces hand inserting.* Press operator requires no assistance.

WebMaster also delays shingled delivery long enough to allow stack change-out without press slowdown thus eliminating expensive press downtime. Various options are available to custom fit your individual press operation.

WebMaster

- Slashes labor costs drastically
- Reduces press downtime
- Frees up bindery bottlenecks
- Dramatically improves turnaround time
